

# Hello Skeptics Not Our Friends

\* Hello skeptics not our friends  
we've come to share with you again  
data proving the the earth's warming  
is a phenomenon that we're causing  
because the carbon that we burn with such little care  
has warmed the air  
among the sound of skeptics

\* It's not as if this is unknown  
the charts consistently have shown  
that global sea levels are rising  
but govts are left compromising  
and the public, misinformed by your false logic  
and cherry picks  
still hear the sounds of skeptics

\* And if the doubting finally saw  
projections that left us in awe  
droughts and floods without warning  
less and less arctic ice forming  
and the cure, we have to carve our imitations - bare  
but still you dare  
create the sound of skeptics

what else do we need to show  
before you agree it's time to go  
build infrastructure that's sustainable  
an RCP that is attainable  
but propaganda that you spread for the average Joe  
just steals the show
